

MANAS KUMAR

Computer Science Undergraduate

manasydv123@gmail.com <https://www.linkedin.com/in/manas-kumar-yadav-26013a287/> New Delhi, India

SUMMARY

I am a dedicated Computer Science undergraduate with over two years of experience in developing Android and AI-driven applications. I have a strong record in delivering production-ready applications, solving numerous DSA problems, and achieving finalist status in a national hackathon. My skills include high accuracy in machine learning implementations and effective use of Firebase, enhancing user engagement and app reliability

EXPERIENCE AND OPEN SOURCE

Android Developer Intern

Coding Samurai

10/2025 - 11/2025

An internship focused on building production-ready mobile applications

- Completed a 4-week internship focused on production-ready Android applications
- Built applications using Kotlin, Jetpack Compose, and Firebase
- Implemented authentication, real-time databases, and responsive UI components
- Worked with Git, debugging tools, and agile development practices

Virtual Cyber Security Intern

Deloitte Virtual Internship

2025

An Internship focused on cybersecurity analysis to secure production system

- Performed simulated risk assessment and vulnerability analysis.
- Conducted threat modeling using industry-standard cybersecurity frameworks.
- Delivered structured reports on incident response and mitigation strategies.

Open Source Contribution

GSSOC +OSCI

2025

Open Source community

- Contributed in GSSOC 2025
- Selected for OSCI 2025; maintained Android projects.

EDUCATION

B.Tech in Computer Science and Engineering

KIET Group of Institutions

01/2023 - 06/2027 Ghaziabad

Class X

St. Mary's Christian School

01/2019 - 01/2020

KEY ACHIEVEMENTS

★ Hackathon Finalist & Open Source Contributor

As a finalist at a national hackathon, I showcased my skills in building robust solutions alongside 120+ teams, and contributed over 50 commits to significant open-source projects

SKILLS

Gmail	GitHub	Google Firebase	Data Structures		OOP	Kotlin	Jetpack	Git	Agile	Cybersecurity
Blockchain	Node.js	React	REST	TensorFlow	Keras	Streamlit	Java	Python	C/C++	JavaScript
Android Studio	Retrofit	Hilt	SpringBoot	NLP	MongoDB	SQLite	Docker	Postman	Visual Studio Code	
Figma	UI Path	FastAPI	Node.js	Machine learning						

PROJECTS

Patient Data Secure System using Blockchain (MEDILEDGER)

📅 01/2023

A secure patient data management system leveraging blockchain technology

- Designed a decentralized medical data management system for secure record handling
 - Implemented blockchain-based access control for tamper-proof medical records
 - Integrated IPFS for off-chain storage with on-chain hash verification
 - Built RESTful APIs for patient, doctor, and record management
-

Crop Disease Detection System

📅 01/2023

A comprehensive system for detecting crop diseases using machine learning

- Trained CNN models to detect 38+ crop diseases with over 95% accuracy
- Built full-stack ML system with FastAPI backend and Kotlin Jetpack based frontend
- Optimized inference pipeline for sub-second prediction latency
- Designed scalable APIs and tested concurrent request handling
